

Sequencing results, just right

13 years NGS experience towards unbiased, representative data

Experienced in the whole value chain

We are fortunate to have been in the field of next generation sequencing for thirteen years now, making us one of the leading pioneers in this revolutionary technique.

During this journey we have learned a lot and the experience we've gained has positioned us as a reference in quality and interpretation of omic results.

Bioinformatics

Understanding

Flexible & Powerful

Understanding microbial ecologies

- Complex sample characterization (16S rRNA, ITS, metagenome...)
- Strain functional evaluation, safety and regulatory assessment
- Clinical trials follow-up and bio-statistics

Ad-hoc Sequencing services

- Strategy development to prevent contamination
- Exome sequencing, Small RNA, RNAseq, differential transcriptome...
- Bioinformatics, advanced analytics, and results discussion

Food fraud and safety evaluation

- Contamination with allergens
- Counterfeiting monitoring
- Genotyping by Sequencing

Nutrition through microbiome

- DIY kits (Branded and private label)
- Food and well-being recommendations
- Monitoring lifestyle goals

Quality certified

Not only we are Illumina Propel Certified, but we have shown our excellence in the top scientific journals.

Our follow up of clinical trials follows the highest standards, which is shown in the quality of our published results.
